

Faecal 1 Elastase Test

What is a faecal 1 Elastase Test ?

This is a test that measures the amount of a digestive enzyme secreted by the pancreas.

Why is this test needed ?

The test can tell us if your pancreas is producing enough digestive enzymes to help you absorb your food adequately.

How is the test carried out ?

You will need to provide a small (cherry size) sample of stool.

What will the test result show ?

If your test result shows that you are not producing enough digestive enzymes, you will need to be started on replacement digestive enzymes. These are capsules you will need to take with your food and some drinks. If your test result is normal and shows you are producing enough digestive enzymes, you will not need to make any changes or have any new medication.
